IDE worked on   : PyCharm, Eclipse, NetBeans, Android Studio, Arduino

PROJECT DETAILS

Nrjsharma – http://nrjsharma.com/

This is my digital portfolio. This is where i showcase all the projects that I have enjoyed working on recently and I share a little bit about my personal life too.

Automi - http://automi.in/

It is a home automation solution based upon Internet of Things (IoT). It uses multiple sensors like LDR(Light Dependent Register) and Fingerprint Scanner.

Using automi user can remotely control home appliances like light, fan, tv etc as 'Internet of Things' devices. These devices can be controlled either by website or Android app.

Last Night Study - http://lastnightstudy.com/

Initially, I created this website to upload and share question paper of different course of Punjabi University. Then slowly I started uploading my notes of different subjects of computer engineering like data mining, java, and python on the website.

In this project, I have also worked on Search Engine Optimization in order to get some traffic to the website. And today many links of this website rankeds first or in top five search result in Google. Because of it, according to Google Analytics www.lastnightstudy.com has more than 40K views.

I also tried to develop lastnightstudy it's own search engine. So that user can search the topic inside the website and if there is a topic present related to the search, then it is shown in the search results of the website.

I Can Upload - http://icanupload.com/

Icanupload is a file-sharing platform that allow a user to upload his/her files without any signup and login.

When a user uploads a file then a key is generated and if it is required to keep the data private then user can set a password on that key. User can use the same key and password to download those files.

I am also building an android app for this project which allows a user to upload files from Android app and user can download it from website and vice versa

Bloggy - https://github.com/nrjsharma/bloggy

This project is built on the Django web framework. This is a blogging website in which the user can login and write their blogs. Users can also see blogs written by other people, search blogs, like and comment on blogs.

In this project, I used various interface and tools provided by Django like Managers interface, Forms framework, Messages framework, Pagination, Template inheritance and generate fake data using Faker package etc.

I also used ajax so that users can like, dislike and comment on a post without reloading a page.

ACHIEVEMENTS

Served around 40k user in a year on my website lastnightstudy.com and also developed a module for a live project in a company ZedStart Solutions.

DECLARATION

The above mentioned information and particulars are true and correct to the best of my personal knowledge and belief.

PERSONAL DETAILS

Name : Neeraj Sharma
Father 's Name : Roop Chand
Gender : Male
